

Single Chemical Pre-Dilution Tank

Provides Ultra Lean Dilutions for the Farm

Hydro Systems is proud to announce the introduction of a single chemical pre-dilution tank system. This system, featuring the Hydro Systems HydroMinder technology, replaces the need for off-line mixing. When handling a single chemical, it can provide ultra lean dilutions down to single digit parts per million (ppm) when used with an injector.

Features and Benefits

- Displays open architecture capabilities and can be used with injectors that are currently installed
- Constructed out of polypropylene resulting in good overall chemical resistance to chlorine, acidifiers, etc.
- The 10 Liter designs can be either wall mounted or placed on the ground allowing for installation versatility
- Eliminates the need to mix product off-line resulting in less errors
- Lower cost of ownership – Mix-on-demand feature results in less human monitoring and allows for only the mixing of chemicals that you need
- Simple to install – requires only pliers or channel locks, which results in less installation costs

Principal Applications

Teat Dip Preparation and Sanitization of Water Lines

General Specifications

Tank Capacities: 10 L (wall mount capability) and 55 L

Installation Options: Wall Mount (10 L design) and Floor Mount Options (10 and 55 L designs)

Main Components: Reservoir tank, Venturi System to pull concentrated chemical from the container and a float to monitor mixed solution levels

Metering Tips

Different metering tips available when using the tank along with a medicator at 1:128.

- Pink = 25 ppm
- Purple = 50 ppm
- Aqua = 100 ppm
